Executive summary

This report contains the performance, scalability, privacy and integrity goals of the integrated platform, and defines the methods that will be used to assess if these goals are reached. We first present a summary of all the tests in Section 1. In Section 2, we describe the methodology used to test the individual components of the platform. The tests for these individual components follow: the secure communication components in Section 3, the secure storage components in Section 4, and the secure queries components in Section 5. The individual components are ultimately used in the project use cases, and will be further tested in an integrated way. The tests and pilots for the Cloud&Heat use cases are discussed in Section 6, and the tests and pilots for the Maxdata use cases are presented in Section 7.
