

## **Innovation Report**

**D7.11**

**Project reference no. 653884**

**August 2018**

**European  
Commission**

Horizon 2020  
European Union funding  
for Research & Innovation

## Executive summary

The objective of this deliverable is to provide information relative to innovation actions conducted in the scope of the project. The report includes a list of all the background and third-party software used in the project, with an analysis of license compatibility and costs, an identification of the articulation between dissemination efforts and exploitation, and a Business Plan for the project spin-off, SafeCloud Technologies.

The major changes in the updated Intellectual Property Rights (IPR) list are related to modifications in the third-party software used by INESC ID and UniNE. The analysis of the list did not raise any concerns regarding the exploitation models foreseen for the results.

The most recent dissemination efforts, covered in this report from the point of view of articulation with exploitation, have shifted in focus from problems and technologies to solutions, use cases, and demonstrations. The report provides an organized view of how more generic or more specific project content, relevant to a variety of participants in the project's industry partners and spin-off value networks, was communicated using a mix of generic and specific channels.

The report closes with the Business Plan for SafeCloud Technologies, describing how the spin-off leverages unique technical capabilities developed in the project for a portfolio of products and services addressing relevant opportunities in the marketplace, at the core of a business model that will allow it to create, deliver and capture value in a sustainable manner.
